

Acne Alopecia The Clinical Practice Of Chinese Medicine

Acne Alopecia The Clinical Practice

Autoimmunity. Much evidence supports the hypothesis that alopecia areata is an autoimmune condition. The process appears to be T-cell mediated, but antibodies directed to hair follicle structures also have been found with increased frequency in alopecia areata patients compared with control subjects.

Alopecia Areata: Practice Essentials, Background ...

Acne, also known as acne vulgaris, is a long-term skin disease that occurs when hair follicles are clogged with dead skin cells and oil from the skin. It is characterized by blackheads or whiteheads, pimples, oily skin, and possible scarring. It primarily affects areas of the skin with a relatively high number of oil glands, including the face, upper part of the chest, and back.

Hair loss, also known as alopecia or baldness, refers to a loss of hair from part of the head or body. Typically at least the head is involved. The severity of hair loss can vary from a small area to the entire body. Typically inflammation or scarring is not present. Hair loss in some people causes psychological distress.. Common types include: male-pattern hair loss, female-pattern hair loss ...

Hair loss - Wikipedia

Introduction. Alopecia areata (AA) is a form of non-scarring hair loss that is mediated by inflammatory mechanisms. With a prevalence of about 1.7-2.1%, AA is one of the most common autoimmune diseases in the US (Strazzulla et al., 2018b).The development of AA is indiscriminate between the sexes and among ethnicities, with initial onset often occurring before age 30 years.
