Animals From Mythology To Zoology

Animals are multicellular eukaryotic organisms that form the biological kingdom Animalia. With few exceptions, animals consume organic material, breathe oxygen, are able to move, can reproduce sexually, and grow from a hollow sphere of cells, the blastula, during embryonic development. Over 1.5 million living animal species have been described—of which around 1 million are insects—but it has ...

In Islam, animals are conscious of God. According to the Quran, they praise him, even if this praise is not expressed in human language. Baiting animals for entertainment or gambling is prohibited. The Quran explicitly allows the eating of the meat of certain halal (Arabic: **حلال**, lawful) animals. Although some Sufis have practised vegetarianism, there has been no serious ...

The wolverine (/ˈwʊlvəriːn/) (also spelled wolverene), *Gulo gulo* (*Gulo* is Latin for "glutton"), also referred to as the glutton, carcajou, skunk bear, or quickhatch, is the largest land-dwelling species of the family Mustelidae. It is a stocky and muscular carnivore, more closely resembling a small bear than other mustelids. A solitary animal, it has a reputation for ferocity and ...
