Chapter 22 The Lymphatic System Flashcards | Quizlet
The lymphatic system is part of the vascular system and an important part of the immune system, comprising a large network of lymphatic vessels that carry a clear fluid called lymph (from Latin, 'lympha meaning "water") directionally towards the heart. The lymphatic system was first described in the seventeenth century independently by Olaus Rudbeck and Thomas Bartholin.

Lymphatic system - Wikipedia
The immune system is the complex collection of cells and organs that destroys or neutralizes pathogens that would otherwise cause disease or death. The lymphatic system, for most people, is associated with the immune system to such a degree that the two systems are virtually indistinguishable.

138 21.1 Anatomy of the Lymphatic and Immune Systems
Whenever there is a difference in pressure between two locations fluid flows from the region of high pressure to that of low by bulk flow. The heart causes blood to flow by creating a mean arterial pressure that is greater than the pressure in the veins. Hence, a pressure gradient drives the blood from the arteries to the veins.

Chapter 1 Introduction to Anatomy and Physiology 13 Anatomy 1 Define anatomy. Anatomy is the study of structure and structural relationships of the body and / or its parts.

INTRODUCTION TO ANATOMY AND PHYSIOLOGY WORKSHEETS - KEY
The cerebrospinal fluid (CSF) is produced from arterial blood by the choroid plexuses of the lateral and fourth ventricles by a combined process of diffusion, pinocytosis and active transfer. A small amount is also produced by ependymal cells. The choroid plexus consists of tufts of capillaries with thin fenestrated endothelial cells. These are covered by modified ependymal cells with bulbous ...

CEREBROSPINAL FLUID - Neuropathology
The function of the digestive system is to break down the foods you eat, release their nutrients, and absorb those nutrients into the body. Although the small intestine is the workhorse of the system, where the majority of digestion occurs, and where most of the released nutrients are absorbed into the blood or lymph, each of the digestive system organs makes a vital contribution to this ...

23.1 Overview of the Digestive System - Anatomy and Physiology
Lymphoma is a group of blood cancers that develop from lymphocytes (a type of white blood cell). The name often refers to just the cancerous versions rather than all such tumors. Signs and symptoms may include enlarged lymph nodes, fever, drenching sweats, unintended weight loss, itching, and constantly feeling tired. The enlarged lymph nodes are usually painless.
