Gerald M. Fenichel MD, in Clinical Pediatric Neurology (Sixth Edition), 2009. Juvenile Progressive Bulbar Palsy. Juvenile progressive bulbar palsy, also known as Fazio-Londe disease, is a motor neuron disease limited to bulbar muscles. Most cases are sporadic; autosomal recessive inheritance is the suspected means of transmission, but a rare autosomal dominant subtype may occur.

At least 41 systems measure the severity, or grade, of a mild head injury, and there is little agreement about which is best. In an effort to simplify, the 2nd International Conference on Concussion in Sport, meeting in Prague in 2004, decided that these systems should be abandoned in favor of a 'simple' or 'complex' classification. However, the 2008 meeting in Zurich abandoned the simple ...
