Disease Surveillance A Public Health
Disease surveillance is an epidemiological practice by which the spread of disease is monitored in order to establish patterns of progression. The main role of disease surveillance is to predict, observe, and minimize the harm caused by outbreak, epidemic, and pandemic situations, as well as increase knowledge about which factors contribute to such circumstances.

Disease surveillance - Wikipedia
Communicable Disease Surveillance Centre. The Public Health Wales Communicable Disease Surveillance Centre (CDSC) is the epidemiological investigation arm of the National Public Health Service for Wales. It protects the population from infection through surveillance of infectious disease, support for outbreak investigation, provision of health intelligence and applied research.
