

Engine Data Recorder For Railway Engines Concept And Design

Engine Data Recorder For Railway

A data logger (also datalogger or data recorder) is an electronic device that records data over time or in relation to location either with a built in instrument or sensor or via external instruments and sensors. Increasingly, but not entirely, they are based on a digital processor (or computer). They generally are small, battery powered, portable, and equipped with a microprocessor, internal ...

Rail terminology is a form of technical terminology. The difference between the American term railroad and the international term railway (used by the International Union of Railways and English-speaking countries outside the United States) is the most significant difference in rail terminology. There are also others, due to the parallel development of rail transport systems in different parts ...

Authorship of railway literature. General criteria. Too many assertions are made by enthusiasts which castigate notable engineers, notably Fowler, Gresley and Webb, without giving any indication of their own standing to make these judgements or, in many cases, quoting reliable sources for their condemnations.
