Natural logarithms have a base of e. We write natural logarithms as  $\ln$ . In other words,  $\log_e x = \ln x$ . The mathematical constant e is the unique real number such that the derivative (the slope of the tangent line) of the function  $f(x) = e^x$  is  $f'(x) = e^x$ , and its value at the point  $x = 0$ , is exactly 1.

### Common and Natural Logarithms and Solving Equations ...

SOLVING LOGARITHMIC EQUATIONS. Step 2: By now you should know that when the base of the exponent and the base of the logarithm are the same, the left side can be written x. The equation can now be written . Step 3: The exact answer is and the approximate answer is Check: You can check your answer in two ways.

Logarithmic Equations.  $x = 3$  checks, for  $\ln 7 + \ln 1 = \ln 7$ .  $x = -5$  does not check, for when we try to substitute  $-5$  for  $x$  in the original equation we are taking the natural logarithm of negative numbers, which is not defined. So,  $x = 3$  is the only solution.
