Dear Advocaters, It is with sadness that I announce that this edition of the HCV Advocate newsletter is the last one. Included in this issue of the HCV Advocate are the following articles:

HCV Advocate
Epidemiology: Coinfection with hepatitis B virus (HBV) and HIV is common, with 70-90% of HIV-infected individuals in the United States having evidence of past or active infection with HBV. (1, 2) Factors affecting the prevalence of chronic HBV include age at time of infection and mode of acquisition, which vary geographically. In the United States and Western Europe, HBV often is acquired in ...

Hospital eTool: Healthcare Wide Hazards - Bloodborne Pathogens
Are you or someone you know at risk for hepatitis B? You might be more at risk than you think, and since hepatitis B is vaccine preventable, it makes sense to get tested and vaccinated for HBV. Hepatitis B is the number one cause of liver cancer worldwide. The survival statistics for liver cancer are particularly grim, with a relative 16.6% 5-year survival rate.

Who’s at Risk for Hepatitis B? Learning the Hep B Basics ...
Dolutegravir (DTG) Safety Statement, updated March 20, 2019: On December 7, 2018, the DHHS Guidelines Panel issued an update to its prior statement in response to preliminary results from a study that reported increased risk of NTD in babies born to mothers taking DTG-based ART at the time of conception. Updated data are pending and expected to be released in 2019.

Exposure to HIV (oPEP) - AIDS Institute Clinical Guidelines
Providing that acute viral hepatitis does not progress to FHF, many cases resolve over a period of days, weeks, or months. Acute HBV infection is generally considered resolved once an individual has developed antibodies to the hepatitis B surface antigen (anti-HBs) and has cleared hepatitis B surface antigen (HBsAg) from their serum.[]...

Viral Hepatitis: Background, Pathophysiology, Etiology
Recommendation for HCV Testing for Persons With Ongoing Risk Factors; RECOMMENDED RATING: Annual HCV testing is recommended for persons who inject drugs and for HIV-infected men who have unprotected sex with men. Periodic testing should be offered to other persons with ongoing risk factors for HCV exposure.
