Inert gas asphyxiation is a form of asphyxiation which results from breathing a physiologically inert gas in the absence of oxygen, or a low amount of oxygen, rather than atmospheric air (which is largely composed of nitrogen and oxygen). Examples of physiologically inert gases, which have caused accidental or deliberate death by this mechanism, are argon, helium, nitrogen and methane.

Popcorn (popped corn, popcorns or pop-corn) is a variety of corn kernel, which expands and puffs up when heated.. A popcorn kernel's strong hull contains the seed's hard, starchy endosperm with 14-20% moisture, which turns to steam as the kernel is heated. Pressure from the steam continues to build until the hull ruptures, allowing the kernel to forcefully expand from 20 to 50 times its ...

Conditions in the Mines. Conditions for those who worked in the coal mines of Britain was probably as bad as, although different from, the conditions of those who worked in the cotton mills. Miners had to work long hours in the dark and wet with a number of hazards to deal with which were not to be found in many other work-places. These included
